SUMMARY

Backend engineer with 6 years of experience designing and scaling distributed Java services for payments and lending platforms. Comfortable owning a service from API design through to on-call.

TECHNICAL SKILLS

Java, Spring Boot, Spring Security, Hibernate, PostgreSQL, Redis, Apache Kafka, Docker, Kubernetes, AWS, REST API, JUnit, Mockito, CI/CD, Prometheus, Grafana, System Design

WORK EXPERIENCE

Senior Software Engineer, Fintech Labs, Bengaluru (2021 - Present)
- Designed a payments orchestration service in Spring Boot handling 1.2 million transactions a day.
- Modelled and tuned the PostgreSQL schema behind it, cutting p99 settlement latency from 900ms to 180ms.
- Introduced Kafka for settlement events, replacing a nightly batch job.
- Ran the service on Kubernetes with Prometheus and Grafana dashboards; carried the pager for it.
- Mentored three engineers and ran the team's system design reviews.

Software Engineer, Cloud Systems, Pune (2018 - 2021)
- Built REST APIs in Java and Spring Boot for a logistics tracking product.
- Containerised eight services with Docker and moved the team onto a GitHub Actions CI/CD pipeline.
- Raised unit test coverage from 34% to 81% with JUnit and Mockito.

EDUCATION

B.Tech in Computer Science and Engineering, VIT University, 2018 - CGPA 8.7/10

PROJECTS

Resume ranker - a small Spring Boot service that scores resumes against a job description.
